

Match each value on the left with the appropriate phrase on the right. All items have at least one match, some have two matches.

Convert decimal to fraction, or mixed number.
(As is normally expected, reduce or simplify, if possible.)

1) $-23.017 = -23 \frac{17}{1000}$

2) $0.14 = \frac{14}{100} = \frac{7}{50}$

3) $6.002 = 6 \frac{2}{1000} = 6 \frac{1}{500}$

Convert fraction or mixed number to decimal.

4) $7 \frac{9}{10} = 7.9$ | Or the long way:
 $\frac{9}{10} = 10 \overline{)9.0}$
 $\underline{-90}$
 0 | 7.9

5) $\frac{4}{5} = 0.8$ | Or notice that:
 $\frac{4}{5} \cdot \frac{2}{2} = \frac{8}{10} = 0.8$

6) $\frac{3}{8} = 0.375$ | Much harder to notice:
 $\frac{3}{8} \cdot \frac{125}{125} = \frac{375}{1000} = 0.375$
